

Blog: whitepaper on changes in technology law

Date : November 18, 2014

Cordery lawyers Jonathan Armstrong and Patrick O'Kane have been working on a whitepaper for Absolute Software on changes in technology law. Absolute Software is well-known for its work in persistent endpoint security and management for computers, laptops, tablets and smartphones. This allows organisations to secure their mobile devices without the user needing to worry about installation – and the software stays in place even if thieves attempt to clean the machine to sell it. Absolute's solutions provide organisations with actionable intelligence to help prove compliance, securely manage BYOD, and deliver comprehensive visibility and control over all of their devices and data.

The paper looks at the future of data protection and data security law in Europe including:

- The proposed new EU data protection Regulation.
- The right to be forgotten.
- Some recent cases around BYOD and data security.
- Avoiding data protection fines

Copies of the paper are available for download at Absolute Software's site [here](#)

Jonathan Armstrong and Patrick O'Kane are lawyers with Cordery in London where their focus is on compliance issues.
